## Fabrication Systems

The same exterior hanging systems can be used on the interior for ALUCOBOND PLUS installation. However, the lack of windloads and exterior forces allows for simpler hanging systems with less reinforcement.

### Face Fastened

A Face Fastened system eliminates the need for routing panels, and can provide a clean aesthetic when using fasteners that are painted to match ALUCOBOND panels.

### Edge Capture

Edge Capture systems allow for the least amount of preparation of the ALUCOBOND panels, and can be a great option for feature walls or decoration.

### Tape

Taped systems have long been used in both the exterior and interior markets. Tape systems involve shop application of hanging extrusions which are then hung onto pre-placed clips or rails. Manufacturers such as 3M and Tesa, have numerous products that have been successfully used in hanging ACM all over the world.
